Research data management

Efficient planning and open FAIR data

Presentation distributed under a CC-BY license, ©Julien Colomb, available at https://doi.org/10.5281/zenodo.1293376

Congratulation !

Congratulation !

Time to do great science and gather data !

After publication, all data and materials […] must be **available** to any reader.

Time to do great science and gather data !

Data should be made accessible at a stage of processing that **allows it to be <u>usefully reused</u>** by third parties (raw data or structured data).

After publication, all data and materials […] must be **<u>available</u>** to any reader.

Time to do great science and gather data !

Data should be made accessible at a stage of processing that **allows it to be <u>usefully reused</u>** by third parties (raw data or structured data).

After publication, all data and materials […] must be **<u>available</u>** to any reader.

<u>Staff is committed</u> to the secure storage, processing, documentation and preservation of their research data for the long term.

Time to do great science and gather data !

<u>Staff is committed</u> to the secure storage, processing, documentation and preservation of their research data for the long term.

Time to do great science and gather data !

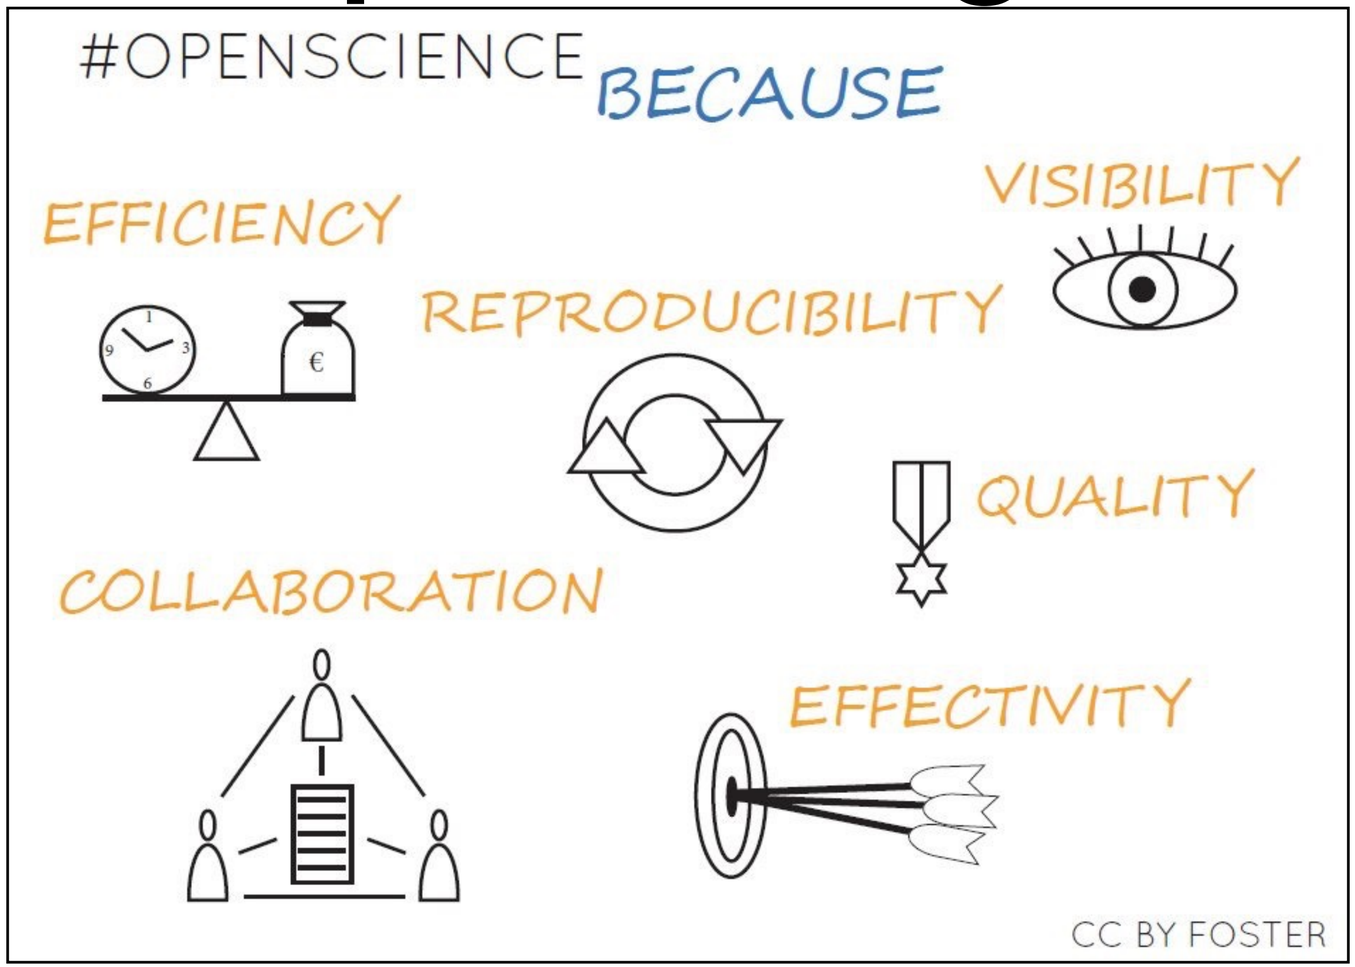
Open FAIR data is coming !

Open FAIR data is coming !

it is a complex but good thing !



Good news #1

Good news #1

Planning how your data will be gathered, stored and finally shared will save you (and your team) time !

Good news #1

you **must submit a first version of your dmp [data management plan]** (as a deliverable) within the first 6 months of the project.

Planning how your data will be gathered, stored and finally shared will save you (and your team) time !
